

1. Child Development Centre New Service: Intellectual Disability Clinic

The Child Development Centre (CDC) is a multidisciplinary service funded mostly via the Ministry of Health disability contract. CDC provides an assessment and intervention service to children 0 -15 years of age with developmental disorders. A new clinic has been set up to provide an efficient and more equitable service to those school aged children presenting with probable intellectual disability. A half day psychology assessment of intellectual and adaptive functioning will be provided. A follow-up appointment (3 weeks later) is then offered with the psychologist and a developmental paediatrician. Strict criteria for entry into this clinic (see attachment with April Outreach) should ensure this is a seamless process for children and their families.

2. Pain Clinic Referrals

Dr Anders Johnson and Dr David Kibblewhite ask for your help to enable them use the Waikato Hospital Pain Clinic resources most effectively. Within available resources, they want to give the most urgent patients the greatest priority and provide management assistance to as many patients as possible.

Their ability to do this is dependent on information provided in the referral letter. Typed referrals are preferred and information should include a detailed pain history, symptoms and signs caused by the pain, results of previous assessments and investigations, your provisional pain diagnosis, current and previous treatments and their results, other medical and social history and ACC details if applicable.

When the referral information is sufficiently detailed they may be able to give advice, either as an alternative to the patient having to attend a clinic, or to assist while the patient is waiting to be seen.

If the situation is urgent, please feel free to contact one of the pain clinic physicians via the hospital switchboard.

3. Getting the Best Out of the Waikato Hospital Acute Referral Process

To help avoid any confusion when a patient arrives at the Emergency Department, it is extremely helpful to state clearly on the referral letter which speciality registrar the patient has been discussed with. Please also indicate on the letter if you have had to leave a voicemail message.

4. Plastics and Dermatology Skin Lesion Referrals

In last month's Outreach there was a brief item about referrals to these clinics, which was mistakenly included before details had been finalised. Further information will be sent once full details have been confirmed.

5. Child Health Discharge Information for Families Pilot Project

From April 1st family-focused discharge information using the 'Things to do' form is being piloted across the 8 key child health sites within Waikato, Tokoroa and Thames hospitals. The 'Things to do' form is offered to parents/caregivers of children and young people under 16 years after contact with

the hospital service and aims to provide user-friendly information specific to their child's care after discharge.

The completed 'Things to do' form is faxed to the practice nurse/GP- and focuses on strengthening and supporting the primary/secondary interface and promoting the continuum of care for children and young people.

Evaluation of the pilot will include the opportunity for parents and staff in both primary and secondary care to have input.

Important: The 'Things to do' form is *additional* to the WDHB discharge summary which will continue to be sent to the GP as usual.

Contact person: Andrea Mockford, Nurse Co-ordinator, Child Health (Waikato DHB) Phone: 021 359 580, email: mockfora@waikatodhb.govt.nz

6. Welcome to...

Rikard Linder, cardiologist, from Sweden. Rikard's special interests are coronary interventions and antithrombotic therapy. His wife, Susanne Klerck Linder, has also joined Waikato Hospital as a general physician, with a focus on cardiology. They and their 3 children are all keen skiers and would love to learn surfing. They say coming to New Zealand is a big adventure and they are really excited about getting to know the country.

James Cleland, neurology. James is a New Zealander who completed his postgraduate training in the USA, where he has been for the last 8 years. He is a general neurologist with a special interest in neuromuscular diseases and an active research interest in genetic channelopathies of the nervous system. He says he is thrilled to return to New Zealand and to the Waikato in particular.

Winston McEwen, plastic surgery locum for 12 months. Winston recently returned from working in Zambia and previously spent 6 months in Perth.

Dinesha De Silva, respiratory medicine locum, is covering Janice Wong's maternity leave and will be staying on for a while afterwards to cover some other leave.

Graeme Dickson, gastroenterologist. Previously here as a registrar, Graeme will contribute to the full range of gastroenterology services.

Srini Yellapu, general surgeon. Srini has returned from the UK to a permanent position. He has a special interest in colorectal surgery.

And farewell to...

Hugh McAlister who has worked at Waikato Hospital for 17 years, has gone to Townsville, Australia to set up an electrophysiology service. His many achievements while here included bringing the pacing service into the 20th century, developing an EP and ablation service and an adult congenital heart disease clinic. At a national level he was a driving force behind the atrial fibrillation guidelines and had a major role in genetic testing for QT syndrome.

Ron Gannaway has been an active member of the breast care team since 1994, providing services both at Waikato Hospital and Te Kuiti until his retirement in January 31st. Ron was a true general surgeon during much of his career at Te Kuiti until, more recently, he concentrated on breast surgery.

Clinic	Category	Waiting Time
Audiology	Children 9-32 mths	2 months
	Under 17 years	2-3 months
	Children's hearing aids	4 weeks
	Adult diagnostic tests	4 months
