

Waikato District Health Board

Health Needs

Assessment and Analysis

HNA 2008

ACKNOWLEDGEMENT

The editors would like to thank the many people inside and outside Waikato DHB who contributed to this report.

CENSUS DATA

This publication focuses more on 2006 Census population estimates and projections to provide the most up to date picture of the Waikato DHB as possible.

DISCLAIMER

Figures provided in this document need to be interpreted with caution. Some discrepancies may exist between tables. This variation is a result of the data following Section 37 of the Statistics Act 1975 that requires all published statistical information to be arranged in a manner as to prevent any particulars from a respondent being identified by any person or undertaking (other than the person by whom those particulars are supplied).

Statistics New Zealand and others often utilise a confidentiality assurance technique of randomly rounding statistics to base three (where cells smaller than three are not shown and all numbers are rounded to a multiplier of three). This enables the greatest possible amount of data to be published, without compromising the privacy of individual respondents. As a result, some tables may appear to differ in totals.

While every effort has been made to ensure accuracy in obtaining and collating information, Waikato DHB can give no warranty as to the correctness of the information contained in the document; the information is only as accurate as the sources that provide the data and Waikato DHB will not be liable for any loss or damage arising directly or indirectly from the supply of this publication.

SOURCES OF DATA

The 2006 Census data was extracted from the Statistics New Zealand website: www.statsnz.govt.nz

The latest population projection data was supplied to Waikato DHB through the Ministry of Health.

Waikato District Health Board

Including Population Health Unit, Health Waikato and Planning & Funding Divisions – maps, patient discharge data and other health related information.

Ministry of Health

Including New Zealand Health Information Service (NZHIS), and Sector Funding and Performance Directorate – mortality, morbidity and other disease specific data.

Technical Advisory Services

The Technical Advisory Service (TAS) is a shared support agency for six central region DHBs. The central region TAS is an expert advisory service, which is combining information management and analytical capabilities with health service experience and project management skills to provide health service advice. TAS provided the data cubes for detailed analysis and assessment.

REQUEST FOR COPIES

This document is available on the Waikato DHB internet (www.waikatodhb.govt.nz) and intranet (Planning and Funding page). Requests for hard copies of this publication and inquiries concerning reproduction should be directed to:
